

At the request of one of our Customers we conducted an experiment on the reinforced concrete section of the floating dock, which is over 60 years old.

With a pneumatic hammer, they removed the protective layer of concrete and made sure that the non-galvanized steel reinforcement had not corroded for 60 years!

A very clear example of the use of high quality sulphate resistant Portland cement to ensure the longevity of our floating docks to keep you afloat.

CONCRETE AND STEEL OVER TIME

REINFORCED FERRO-CONCRETE

OLDER ALL STEEL CONSTRUCTION
