

**For the safe operation of the dock we use a “FREE FLOATING” mode, which provides dock’s unsinkability under maximum submersion while intake and distributing gates are open.**

**In case of emergency (absence of voltage, blocking or malfunction of intake and distributing gates) the dock will not sink.**

\*\*\*

Example of the dock, where the “FREE FLOATING” mode was absent, is the Russian floating dock (PD-50), which sank in Murmansk (Roslyakovo) in 2018.
